

Bidirectional Diac

Features

The three layer, two terminal, axial lead, hermetically sealed diacs are designed specifically for triggering thyristors. They demonstrate low breakover current at breakover voltage as they withstand peak pulse current, The breakover symmetry is within three volts (DB3,DB4). These diacs are intended for use in thyristors phase control , circuits for lamp dimming,universa motor speed control ,and heat control.

Mechanical Data

Case: MiniMELF Glass Case (SOD-80)
 Polarity: Color band denotes cathode end
 Mounting Position: Any
 Weight: approx. 0.002 ounce, 0.05grams

Ratings and Characteristic Curves $T_{amb} = 25\text{ }^{\circ}\text{C}$ unless otherwise specified

Relative variation of V_{BO} versus junction temperature (typical values).

Repetitive peak pulse current versus pulse duration (maximum values).

Time duration while current pulse is higher 50mA versus C and R_s (typical values).
