

RODYX CD60

Production Description:

This kind of capacitors are developed and researched according to standard of American Electronics Association(ANSI/EIA-463). The external case of the capacitor is made of bakelite plasticized that its character are not only good insulating resistance and strong resistance damaged but also protecting electro-liquid as good sealed feature. It is popular used for the super AC application as good life higher degree of reliability and stability.

Usage:

The motor start capacitor is range of AC electrolytic capacitors. These capacitors are most often used to provide the torque necessary to start AC motors and in other intermittent AC applications.

Features:

- Two 25".6.35mm.Quick connect terminals
- Round moisture and oil resistant plastic case
- Quick disconnect terminals
- Recessed terminals
- Long life and high reliability

Main Technical Parameter

Rated Capacitance:	21-1280mfd
Rated Capacitance:	0±20%
Rated Alternate Voltage:	110V-330V
Rated frequency:	50/60Hz
Working Temperature Range:	-10~+60°C
Dissipation Factor:	$\tan \delta \leq 0.2$ (100Hz,20°C)
Without Voltage Between Terminal:	Apply 1.25 times working voltage for 2S Without break down or explosion
Withstand voltage Between Terminal And case:	2000VAC for 10seconds without break down or explosion
